

# Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

## 1. Administrative & Study Identification

|                          |                                                                                                                                                                                                                                                                                                                          |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Full Study Title:        | MK-2400-01A Substudy: A Phase 1/2, Open-label Umbrella Substudy of MK-2400-U01 Master Protocol to Evaluate the Safety and Efficacy of Ifinatamab Deruxtecan-based Treatment Combinations or Ifinatamab Deruxtecan Alone in Participants With Metastatic Castration-resistant Prostate Cancer (mCRPC) (IDeate-Prostate02) |
| Short Title:             | A Clinical Study of Ifinatamab Deruxtecan Based Treatment Combinations or as Monotherapy to Treat Metastatic Castrate Resistant Prostate Cancer (mCRPC) (MK-2400-01A/IDeate-Prostate02)                                                                                                                                  |
| Protocol Number:         | 791777209618820765                                                                                                                                                                                                                                                                                                       |
| NCT Number:              | NCT06863272                                                                                                                                                                                                                                                                                                              |
| Sponsor Name:            | Merck                                                                                                                                                                                                                                                                                                                    |
| Investigational Product: | docetaxel                                                                                                                                                                                                                                                                                                                |
| Phase:                   | PHASE1, PHASE2                                                                                                                                                                                                                                                                                                           |
| Medical Monitor:         | [Not Provided in Posting]                                                                                                                                                                                                                                                                                                |

## 2. Study Synopsis & Rationale

### 2.1 Study Objective

|                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Primary Objective: | <p>1. Efficacy Phase: Number of Participants Who Experience One or More Dose-Limiting Toxicities (DLTs) - Combination Arms Only: The following events if considered drug related by the Investigator, will be considered a DLT: Grade 4 nonhematologic toxicity (not based on laboratory value); Grade 4 hematologic toxicity lasting ≥7 days, except thrombocytopenia; Grade 4 thrombocytopenia of any duration; Grade 3 thrombocytopenia associated with clinically significant bleeding; Nonhematologic AEs ≥Grade 3 with exceptions; Grade 3 or Grade 4 non-hematologic laboratory values if requires medical intervention, leads to hospitalization, persists for ≥1 week, or results in a Drug-induced Liver Injury with exceptions; Grade 3 or 4 febrile neutropenia; Study intervention - related toxicities that lead to discontinuation of study treatment during Cycle 1; Prolonged delay (≥2 weeks) in initiating Cycles 2 due to treatment-related toxicity; Missing ≥25% of study intervention doses as a result of treatment-related AE during Cycle 1; Grade 5 toxicity.</p> <p>2. Efficacy Phase: Number of Participants Who Experienced an Adverse Event (AE): An AE is any untoward medical occurrence in a clinical study participant, temporally associated with the use of study intervention, whether or not considered related to the study intervention. An AE can therefore be any unfavorable and unintended sign (including an abnormal laboratory finding), symptom, or disease (new or exacerbated) temporally associated with the use of a study intervention.</p> <p>3. Efficacy Phase: Number of Participants Who Discontinued Study Intervention Due to an AE: An AE is any untoward medical occurrence in a clinical study participant, temporally associated with the use of study intervention, whether or not</p> |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

# Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

considered related to the study intervention. An AE can therefore be any unfavorable and unintended sign (including an abnormal laboratory finding), symptom, or disease (new or exacerbated) temporally associated with the use of a study intervention.

## Secondary Obj.:

1. Objective Response Rate (ORR) 2. Radiographic Progression-Free Survival (rPFS) 3. Overall Survival (OS)

## 2.2 Background & Rationale

The purpose of this substudy is to assess the efficacy and safety of ifinatamab deruxtecan (I-DXd), given alone or with other treatments in participants with metastatic castration-resistant prostate cancer (mCRPC). The goals of this study are to learn about:

## 3. Study Design & Methodology

**Design Framework:** Type: INTERVENTIONAL, Phase: PHASE1, PHASE2, Status: RECRUITING  
**Target N:** 360

## 4. Subject Selection (Eligibility Criteria)

### 4.1 Inclusion Criteria

The main inclusion criteria include but are not limited to the following:

- \* Has histologically- or cytologically-confirmed adenocarcinoma of the prostate without small cell histology
- \* Has prostate cancer progression while on androgen deprivation therapy (ADT) (or post bilateral orchiectomy) within 6 months before Screening
- \* Has current evidence of metastatic disease
- \* Has received prior treatment with 1 or 2 androgen receptor pathway inhibitors (ARPIs) and progressed during or after treatment
- \* Participants receiving bone resorptive therapy (including, but not limited to bisphosphonate or denosumab) must have been on stable doses for ≥4 weeks before allocation/randomization
- \* An Eastern Cooperative Oncology Group (ECOG) performance status of 0 to 1 assessed within 10 days before allocation/randomization
- \* Has prior treatment with poly-ADP-ribose polymerase inhibitors (PARPi) if indicated by local approved regimen or were deemed ineligible to receive PARPi by the investigator

### 4.2 Exclusion Criteria

The main exclusion criteria include but are not limited to the following:

- \* History of (non-infectious) interstitial lung disease (ILD)/pneumonitis that required steroids, or has current ILD/pneumonitis or suspected ILD/pneumonitis
- \* Clinically severe pulmonary compromise resulting from intercurrent pulmonary illnesses
- \* Uncontrolled or significant cardiovascular disease
- \* History of pituitary dysfunction

# Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

- \* Poorly controlled diabetes mellitus
- \* History or current condition of adrenal insufficiency (eg, Addison's disease)
- \* Has received prior treatment with taxane-based chemotherapy agent for metastatic castration-resistant prostate cancer (mCRPC).
- \* Chronic steroid treatment (dose of  $\geq 10$  mg daily prednisone equivalent), except for low-dose inhaled steroids (for asthma/chronic obstructive pulmonary disease), topical steroids (for mild skin conditions), or intra-articular steroid injections
- \* Received prior radiotherapy within 2 weeks of start of study intervention, or has radiation-related toxicities, requiring corticosteroids
- \* Known additional malignancy that is progressing or has required active treatment within the past 3 years
- \* Known active central nervous system (CNS) metastases and/or carcinomatous meningitis
- \* Active autoimmune disease that has required systemic treatment in the past 2 years
- \* History of allogeneic tissue/solid organ transplant

## 11. Study Identifiers & Governance

**Primary ID:** 791777209618820765

**Registry Number:** NCT06863272

**Sponsor:** Merck

**Study Title:** A Clinical Study of Ifinatamab Deruxtecan Based Treatment Combinations or as Monotherapy to Treat Metastatic Castrate Resistant Prostate Cancer (mCRPC) (MK-2400-01A/IDeate-Prostate02)

## 15. Sign-off & Approval
