

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	Multiple Phase 1/2 Cohorts of Nivolumab Monotherapy or Nivolumab Combination Regimens Across Relapsed/Refractory Hematologic Malignancies
Short Title:	An Investigational Immuno-Therapy Study to Determine the Safety and Effectiveness of Nivolumab and Daratumumab in Patients With Multiple Myeloma
Protocol Number:	805099539458728727
NCT Number:	NCT01592370
Sponsor Name:	Bristol Myers Squibb
Investigational Product:	dexamethasone
Phase:	PHASE1, PHASE2
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Number of Participants That Experienced Drug Related Grade 3-4 AEs: Number and percent of participants that experienced drug related Grade 3-4 AEs occurring up to 100 days after the last dose of study drug. 2. Number of Participants That Experienced Drug Related Grade 3-4 SAEs: Number and percent of participants that experienced drug related Grade 3-4 SAEs occurring up to 100 days after the last dose of study drug. 3. Number of Participants With Clinical Laboratory Abnormalities by Worst Toxicity Grade - Liver: Number and percent of participants that experienced drug related Grade 3-4 AEs occurring up to 100 days after the last dose of study drug.
Secondary Obj.:	1. Best Overall Response 2. Best Overall Response - Multiple Myeloma Group 3. Duration of Response

2.2 Background & Rationale

The purpose of this study is to determine the side effects of treatment of the combination of nivolumab and daratumumab in participants with relapsed/refractory multiple myeloma.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE1, PHASE2, Status: COMPLETED
Target N:	320

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

* Have received at least 3 prior lines of therapy, including a proteasome inhibitor \[PI\] and an immunomodulatory agent \[IMiD\] OR have disease that is double refractory to a PI and IMiD

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

- * More than 12 weeks post-transplant of your own blood forming stem cells (autologous transplant)
- * Have detectable disease measured by a specific protein in your blood and/or urine
- * Must consent to bone marrow aspirate or biopsy.

4.2 Exclusion Criteria

- * Solitary bone or extramedullary plasmacytoma as the only evidence of plasma cell dyscrasia, or monoclonal gammopathy of undetermined significance (MGUS), smoldering multiple myeloma (SMM), primary amyloidosis, Waldenstrom's macroglobulinemia, POEMS syndrome or active plasma cell leukemia
- * Prior therapy with anti-PD-1, anti-PD-L1, anti-PD-L2, anti-CD137, anti CTLA 4, or anti-CD38 antibody, or allogeneic stem cell transplantation
- * Seropositive for human immunodeficiency virus (HIV), Hepatitis B surface antigen or Hepatitis C antibody positive (except if HCV-RNA negative), or history of active chronic hepatitis B or C
- * History of central nervous system involvement or symptoms suggestive of central nervous system involvement by multiple myeloma

Other protocol defined inclusion/exclusion criteria could apply

11. Study Identifiers & Governance

Primary ID: 805099539458728727

Registry Number: NCT01592370

Sponsor: Bristol Myers Squibb

Study Title: An Investigational Immuno-Therapy Study to Determine the Safety and Effectiveness of Nivolumab and Daratumumab in Patients With Multiple Myeloma

15. Sign-off & Approval

Principal Investigator: _____ Date: _____
