

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Multicenter Non-Interventional Study Evaluating Bleeds and Health-Related Quality Of Life in Patients With Type 3 Von Willebrand Disease on Prophylactic Standard-of-Care Treatment
Short Title:	An Observational Study of Participants With Type 3 Von Willebrand Disease on Prophylactic Standard-of-Care Treatment
Protocol Number:	290416627063928814
NCT Number:	NCT06883240
Sponsor Name:	Roche
Investigational Product:	thrombin
Phase:	Not Applicable
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Annualized Bleed Rate (ABR) for Treated Bleeds
Secondary Obj.:	1. ABR for All Bleeds 2. ABR for Treated Spontaneous Bleeds 3. ABR for Treated Joint Bleeds

2.2 Background & Rationale

This non-interventional study (NIS) is designed to collect information on the effectiveness and safety of treatment received in routine clinical care, as well as measure the health-related quality of life (HRQoL) of participants with Type 3 von Willebrand disease (VWD) receiving prophylactic therapy per local standard of care (SOC) over an observation period of at least 24 weeks.

3. Study Design & Methodology

Design Framework:	Type: OBSERVATIONAL, Status: RECRUITING
Target N:	40

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- * Confirmed diagnosis of Type 3 von Willebrand disease (VWD), based on medical records
- * Adequate hematologic, hepatic, and renal function
- * Documented and confirmed previous use of SOC prophylactic therapy for VWD (1-3 times weekly, as per prescribed dose) and anticipation to remain on the same regimen during the study
- * For participants of childbearing potential: agreement to remain abstinent or adhere to the contraception requirements

4.2 Exclusion Criteria

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

- * Inherited or acquired bleeding disorder other than Congenital Type 3 VWD
- * History of gastrointestinal bleeding within 18 months prior to enrollment, or any previous diagnosis of angiodysplasia
- * History of intracranial hemorrhage
- * Previous or current treatment for thromboembolic disease or signs of thromboembolic disease
- * Other conditions (e.g., certain autoimmune diseases) that may increase risk of bleeding or thrombosis
- * History of clinically significant hypersensitivity associated with monoclonal antibody therapies or components of the emicizumab injection
- * Use of systemic immunomodulators (e.g., interferon) at enrollment or planned use during the study, with the exception of anti-retroviral therapy

11. Study Identifiers & Governance

Primary ID: 290416627063928814

Registry Number: NCT06883240

Sponsor: Roche

Study Title: An Observational Study of Participants With Type 3 Von Willebrand Disease on Prophylactic Standard-of-Care Treatment

15. Sign-off & Approval

Principal Investigator: _____ Date: _____

Clinical Operations Lead: _____ Date: _____
