

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	Retrospective Cohort Study to Assess Utilization and Effectiveness of Ritlecitinib in a Real-World Population With Severe Alopecia Areata in the United States
Short Title:	Utilization and Effectiveness of Ritlecitinib in a Real-World Population With Severe AA in the US
Protocol Number:	35324603108457459
NCT Number:	NCT07226531
Sponsor Name:	Pfizer
Investigational Product:	ritlecitinib
Phase:	Not Applicable
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Patient demographics characteristics: race: Number of percentages of patients by race 2. Patient demographics characteristics: sex, age at initial AA diagnosis, geographic location of patient's treating dermatologist, insurance type: Number of percentages of patients by sex 3. Patient demographics characteristics: age at initial AA diagnosis: Number of percentages of patients by age at initial AA diagnosis
Secondary Obj.:	Not Provided

2.2 Background & Rationale

Alopecia areata (AA) is a chronic, relapsing T-cell mediated autoimmune disease characterized by nonscarring, typically patchy hair loss that affects people of all ages, races, and genders. In the United States (US), AA has an estimated point prevalence of 1.14% (Beningo et al., 2020). The three most common subtypes of AA are defined by the affected area:

3. Study Design & Methodology

Design Framework:	Type: OBSERVATIONAL, Status: NOT_YET_RECRUITING
Target N:	300

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

Not Provided

4.2 Exclusion Criteria

Not Provided

11. Study Identifiers & Governance

Clinical Study Summary Report (CSSR)
