

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	An Open-Label, Randomised, Multi-Drug, Biomarker-Directed, Multi-Centre, Multi-arm Phase 1b Study in Patients With Muscle Invasive Bladder Cancer (MIBC) Who Have Progressed on Prior Treatment (BISCAY).
Short Title:	Open-Label, Randomised, Multi-Drug, Biomarker-Directed, Phase 1b Study in Pts w/ Muscle Invasive Bladder Cancer
Protocol Number:	447446250874052478
NCT Number:	NCT02546661
Sponsor Name:	AstraZeneca
Investigational Product:	olaparib
Phase:	PHASE1
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Module A: The frequency and nature of adverse events related to AZD4547 monotherapy.: The frequency and nature of adverse events will be assessed in order to determine the safety and tolerability of AZD4547 monotherapy given orally to selected patients with MIBC who have progressed following prior therapy. 2. Module A: The frequency and nature of adverse events related to the combination of intravenous MEDI4736 (durvalumab) and oral AZD4547.: The frequency and nature of adverse events will be assessed in order to determine the safety and tolerability of MEDI4736 (durvalumab) given intravenously in combination with AZD4547 given orally to selected patients with MIBC who have progressed following prior therapy. 3. Module B: The frequency and nature of adverse events related to the combination of intravenous MEDI4736 (durvalumab) and oral olaparib.: The frequency and nature of adverse events will be assessed in order to determine the safety and tolerability of MEDI4736 (durvalumab) given intravenously in combination with olaparib given orally to selected patients with MIBC who have progressed following prior therapy.
Secondary Obj.:	1. Objective response rate (ORR) 2. Disease control rate (DCR) 3. Progression free survival (PFS)

2.2 Background & Rationale

This is an open label, multi-drug, biomarker-directed, multi-centre, multi-arm, Phase 1b study in patients with muscle invasive bladder cancer (MIBC) (urothelial) who have progressed on prior treatment. This study is modular in design, allowing evaluation of the safety, tolerability, pharmacokinetics and anti-tumour activity of multiple agents as monotherapy and as combinations of different novel anti-cancer agents.

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

3. Study Design & Methodology

Design Framework: Type: INTERVENTIONAL, Phase: PHASE1, Status: ACTIVE_NOT_RECRUITING
Target N: 117

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

Not Provided

4.2 Exclusion Criteria

Not Provided

11. Study Identifiers & Governance

Primary ID: 447446250874052478
Registry Number: NCT02546661
Sponsor: AstraZeneca
Study Title: Open-Label, Randomised, Multi-Drug, Biomarker-Directed, Phase 1b Study in Pts w/
Muscle Invasive Bladder Cancer

15. Sign-off & Approval

Principal Investigator: _____ Date: _____
Clinical Operations Lead: _____ Date: _____
Lead Statistician: _____ Date: _____
