

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	Real-world Clinical Outcomes of Tucatinib, Trastuzumab, and Capecitabine Following Trastuzumab Deruxtecan for the Treatment of HER2-positive Metastatic Breast Cancer
Short Title:	Real World-clinical Outcomes of Tucatinib, Trastuzumab, and Capecitabine Following Trastuzumab Deruxtecan (T-DXd) for the Treatment of HER2-positive Metastatic Breast Cancer.
Protocol Number:	455359107800024851
NCT Number:	NCT06961331
Sponsor Name:	Pfizer
Investigational Product:	capecitabine
Phase:	Not Applicable
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Time to Next Treatment: Time to next treatment defined as the time in months from the initiation of therapy to the initiation of subsequent LOT or death. 2. Time to Discontinuation: Time to treatment discontinuation defined as the time in months from initiation of therapy to discontinuation for any reason or death. 3. Overall survival (OS): OS will be defined as the time in months from initiation of therapy to death from any cause.
Secondary Obj.:	Not Provided

2.2 Background & Rationale

A retrospective study of de-identified (to preserve patient privacy) patient information from the Flatiron Health Database to describe 3L and 4L real-world (rw) outcomes (e.g. time to next treatment, time to discontinuation, and overall survival) of the tucatinib-trastuzumab-capecitabine triplet therapy immediately following T-DXd therapy in patients diagnosed with HER2+ metastatic breast cancer (mBC) in the United States.

3. Study Design & Methodology

Design Framework:	Type: OBSERVATIONAL, Status: ACTIVE_NOT_RECRUITING
Target N:	93

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

Patients must meet all of the following inclusion criteria to be eligible for inclusion in the study:

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. mBC diagnosis between January 1, 2017 and 6 months prior to database cutoff
2. Evidence of human epidermal growth factor receptor 2 (HER2) receptor positivity prior to or up to 90 days following the mBC diagnosis date
3. At least 18 years old on the mBC diagnosis date
4. Treated with systemic anticancer treatment in the metastatic setting, i.e., post mBC diagnosis.
5. Treated with T-DXd in the 2L or 3L setting, followed immediately by the tucatinib triplet, and at least 1 additional prior HER2-targeted regimen

4.2 Exclusion Criteria

Patients meeting any of the following criteria will not be included in the study:

1. Patients with evidence of other cancers prior to the mBC diagnosis date will be identified with the following International Classification of Diseases, 9th Revision, Clinical Modification (ICD-9-CM) and International Classification of Diseases, 10th Revision, Clinical Modification (ICD-10-CM) codes in all databases: 140.xx - 195.xx, 200.xx - 208.xx, C00.xx - C76.xx, C81.xx - C96.xx. (exclude - ICD-9: 174.X, 175.X; ICD-10: C50.XX)
2. Patients treated with tucatinib or T-DXd prior to the 2L or 3L T-DXd treatment
3. Patients participating in clinical trials
4. Patients receiving concomitant endocrine therapy

11. Study Identifiers & Governance

Primary ID:	455359107800024851
Registry Number:	NCT06961331
Sponsor:	Pfizer
Study Title:	Real World-clinical Outcomes of Tucatinib, Trastuzumab, and Capecitabine Following Trastuzumab Deruxtecan (T-DXd) for the Treatment of HER2-positive Metastatic Breast Cancer.

15. Sign-off & Approval

Principal Investigator: _____	Date: _____
Clinical Operations Lead: _____	Date: _____
Lead Statistician: _____	Date: _____
