

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase 1 Study of SEA-CD70 in Myeloid Malignancies
Short Title:	A Safety Study of SEA-CD70 in Patients With Myeloid Malignancies
Protocol Number:	744516658770387832
NCT Number:	NCT04227847
Sponsor Name:	Pfizer
Investigational Product:	azacitidine
Phase:	PHASE1
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Number of participants with adverse events (AEs): Any untoward medical occurrence in a clinical investigational participant administered a medicinal product and which does not necessarily have a causal relationship with this treatment. 2. Number of participants with laboratory abnormalities: To be summarized using descriptive statistics. 3. Number of participants with a dose-limiting toxicity (DLT) at each dose level (Parts A and D only): To be summarized using descriptive statistics.
Secondary Obj.:	1. AUC - Area under the plasma concentration-time curve 2. Tmax - Time to maximum concentration attained 3. Cmax - Maximum observed plasma concentration

2.2 Background & Rationale

This trial will look at a drug called SEA-CD70 with and without azacitidine, to find out if it is safe for participants with myelodysplastic syndrome (MDS) and acute myeloid leukemia (AML). It will study SEA-CD70 to find out what its side effects are and if it works for AML and MDS. A side effect is anything the drug does besides treating cancer.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE1, Status: RECRUITING
Target N:	178

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

Not Provided

4.2 Exclusion Criteria

Not Provided

11. Study Identifiers & Governance
