2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Independent Review Facility (IRF)-Assessed Event Free Survival (EFS): IRF-assessed EFS is defined as the time from randomization to the first documented disease progression per RECIST v1.1 that precludes surgery, local or distant disease recurrence, or death from any cause, whichever occurs first.
Secondary Obj.:	1. Pathological Complete Response (pCR) 2. Major Pathological Response (MPR) 3. Objective Response (OR)

2.2 Background & Rationale

This is a randomized, double-blinded study designed to evaluate the efficacy, safety, pharmacokinetics, and immunogenicity of neoadjuvant treatment with atezolizumab (MPDL3280A) or placebo in combination with platinum-based chemotherapy in participants with resectable Stage II, IIIA, or select IIIB non-small cell lung cancer (NSCLC) followed by open-label adjuvant/postoperative atezolizumab or best supportive care and monitoring.
