

# Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

## 1. Administrative & Study Identification

|                          |                                                                                                                                                                                                                                            |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Full Study Title:        | Open-Label Rater-Blind Randomized Multi-Center Parallel-Arm Active- Comparator Study to Assess the Efficacy and Tolerability of Ofatumumab 20mg SC Monthly vs. First Line DMT - Physician's Choice in the Treatment of Newly Diagnosed RMS |
| Short Title:             | Open Label Randomized Multicenter to Assess Efficacy & Tolerability of Ofatumumab 20mg vs. First Line DMT in RMS                                                                                                                           |
| Protocol Number:         | 451588077401067684                                                                                                                                                                                                                         |
| NCT Number:              | NCT04788615                                                                                                                                                                                                                                |
| Sponsor Name:            | Novartis                                                                                                                                                                                                                                   |
| Investigational Product: | ofatumumab                                                                                                                                                                                                                                 |
| Phase:                   | PHASE3                                                                                                                                                                                                                                     |
| Medical Monitor:         | [Not Provided in Posting]                                                                                                                                                                                                                  |

## 2. Study Synopsis & Rationale

### 2.1 Study Objective

|                    |                                                                                                                                                                                                                                                                                                                              |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Primary Objective: | 1. Number of participants with no evidence of disease activity (NEDA-3): NEDA-3 (yes/no) is defined as:<br><br>1. Absence of confirmed clinical relapse<br>2. Absence of new MRI activity (Gd+ T1 lesion or new/enlarged T2 lesion) with MRI re-baselined at Month 3<br>3. Absence of 3-month confirmed disability worsening |
| Secondary Obj.:    | 1. Number of relapses 2. Annual relapse rate 3. Percentage of relapse-free patients and proportion of relapse free patients with MRI activity free                                                                                                                                                                           |

### 2.2 Background & Rationale

This study will compare ofatumumab vs. European approved platform first line self-administered disease modifying therapy (DMT) in newly diagnosed MS patients

## 3. Study Design & Methodology

|                   |                                                                    |
|-------------------|--------------------------------------------------------------------|
| Design Framework: | Type: INTERVENTIONAL, Phase: PHASE3, Status: ACTIVE_NOT_RECRUITING |
| Target N:         | 185                                                                |

## 4. Subject Selection (Eligibility Criteria)

### 4.1 Inclusion Criteria

Not Provided

### 4.2 Exclusion Criteria

# Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

Not Provided

## 11. Study Identifiers & Governance

|                  |                                                                                                                  |
|------------------|------------------------------------------------------------------------------------------------------------------|
| Primary ID:      | 451588077401067684                                                                                               |
| Registry Number: | NCT04788615                                                                                                      |
| Sponsor:         | Novartis                                                                                                         |
| Study Title:     | Open Label Randomized Multicenter to Assess Efficacy & Tolerability of Ofatumumab 20mg vs. First Line DMT in RMS |

## 15. Sign-off & Approval

Principal Investigator: \_\_\_\_\_ Date: \_\_\_\_\_  
Clinical Operations Lead: \_\_\_\_\_ Date: \_\_\_\_\_  
Lead Statistician: \_\_\_\_\_ Date: \_\_\_\_\_
