

# Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

## 1. Administrative & Study Identification

|                          |                                                                                                                                                                                                                                                                                                                    |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Full Study Title:        | Two Part (Double-blind Inclisiran Versus Placebo [Year 1] Followed by Open-label Inclisiran [Year 2]) Randomized Multicenter Study to Evaluate Safety, Tolerability and Efficacy of Inclisiran in Children (6 to Less Than 12 Years) With Heterozygous Familial Hypercholesterolemia and Elevated LDL- Cholesterol |
| Short Title:             | Study to Evaluate Efficacy and Safety of Inclisiran in Children With Heterozygous Familial Hypercholesterolemia                                                                                                                                                                                                    |
| Protocol Number:         | 634562336950509525                                                                                                                                                                                                                                                                                                 |
| NCT Number:              | NCT06597019                                                                                                                                                                                                                                                                                                        |
| Sponsor Name:            | Novartis                                                                                                                                                                                                                                                                                                           |
| Investigational Product: | inclisiran                                                                                                                                                                                                                                                                                                         |
| Phase:                   | PHASE3                                                                                                                                                                                                                                                                                                             |
| Medical Monitor:         | [Not Provided in Posting]                                                                                                                                                                                                                                                                                          |

## 2. Study Synopsis & Rationale

### 2.1 Study Objective

|                    |                                                                                                                                                                                                                           |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Primary Objective: | 1. Percentage change in LDL-C from baseline to Day 330 (Year 1): Demonstrate superiority of inclisiran compared to placebo in reducing LDL-C \[percent change\] at Day 330                                                |
| Secondary Obj.:    | 1. Time-adjusted percent change in LDL-C from baseline after Day 90 and up to Day 330 (Year 1) 2. Absolute change in LDL-C from baseline to Day 330 (Year 1) 3. Percent change in PCSK9 from baseline to Day 330 (Year 1) |

### 2.2 Background & Rationale

This is a pivotal phase III study designed to evaluate safety, tolerability, and efficacy of inclisiran in children (aged 6 to <12 years) with heterozygous familial hypercholesterolemia (HeFH) and elevated low density lipoprotein cholesterol (LDLC).

## 3. Study Design & Methodology

|                   |                                                         |
|-------------------|---------------------------------------------------------|
| Design Framework: | Type: INTERVENTIONAL, Phase: PHASE3, Status: RECRUITING |
| Target N:         | 51                                                      |

## 4. Subject Selection (Eligibility Criteria)

### 4.1 Inclusion Criteria

- \* Male or female participants, 6 to <12 years of age at screening
- \* HeFH diagnosed either by genetic testing or on phenotypic criteria
- \* Fasting LDL-C >130 mg/dL (3.4 mmol/L) at screening

# Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

\* For participants 8 to <12 years, on an optimal dose of statin (investigator's discretion) unless statin intolerant, with or without other lipid-lowering therapy (e.g. ezetimibe). For participants <8 years, the use of background lipid-lowering treatment is based on investigator's discretion.

\* Participants on lipid-lowering therapies (such as statin and/or e.g. ezetimibe) must be on a stable dose for ≥30 days before screening with no planned medication or dose changes during study participation.

## 4.2 Exclusion Criteria

\* Previous treatment (within 90 days of screening) with monoclonal antibodies directed towards PCSK9

\* Secondary hypercholesterolemia, e.g. hypothyroidism or nephrotic syndrome

\* Homozygous familial hypercholesterolemia (HoFH)

\* Body weight <16 kg at the screening and/or randomization (Day 1) visit

\* Active liver disease defined as any known current infectious, neoplastic, or metabolic pathology of the liver or unexplained alanine aminotransferase (ALT), aspartate aminotransferase (AST) elevation >3x ULN, or total bilirubin elevation >2x ULN (except patients with Gilbert's syndrome)

\* Pregnant or nursing females

\* Recent and/or planned use of other investigational medicinal products or devices

## 11. Study Identifiers & Governance

**Primary ID:** 634562336950509525

**Registry Number:** NCT06597019

**Sponsor:** Novartis

**Study Title:** Study to Evaluate Efficacy and Safety of Inclisiran in Children With Heterozygous Familial Hypercholesterolemia
