

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase III Randomized, Double-Blind, Placebo-Controlled, Multicenter Study Evaluating the Efficacy and Safety of GDC-9545 Combined With Palbociclib Compared With Letrozole Combined With Palbociclib in Patients With Estrogen Receptor-Positive, HER2-Negative Locally Advanced or Metastatic Breast Cancer
Short Title:	A Study Evaluating the Efficacy and Safety of Giredestrant Combined With Palbociclib Compared With Letrozole Combined With Palbociclib in Participants With Estrogen Receptor-Positive, HER2-Negative Locally Advanced or Metastatic Breast Cancer (persevera Breast Cancer)
Protocol Number:	740358318437416861
NCT Number:	NCT04546009
Sponsor Name:	Roche
Investigational Product:	letrozole
Phase:	PHASE3
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Progression-Free Survival (PFS), as Determined by the Investigator According to RECIST v1.1
Secondary Obj.:	1. Overall Survival 2. Objective Response Rate, as Determined by the Investigator According to RECIST v1.1 3. Duration of Response, as Determined by the Investigator According to RECIST v1.1

2.2 Background & Rationale

This Phase III, randomized, double-blind, placebo-controlled, multicenter study will evaluate the efficacy and safety of giredestrant combined with palbociclib compared with letrozole combined with palbociclib in patients with estrogen receptor (ER)-positive, human epidermal growth factor receptor-2 (HER2)-negative locally advanced (recurrent or progressed) or metastatic breast cancer.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE3, Status: ACTIVE_NOT_RECRUITING
Target N:	992

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

* For women who are premenopausal or perimenopausal and for men: treatment with approved LHRH agonist therapy

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

for the duration of study treatment

- * Locally advanced (recurrent or progressed) or metastatic adenocarcinoma of the breast, not amenable to treatment with curative intent
- * Documented ER-positive tumor and HER2-negative tumor, assessed locally
- * Patients who have bilateral breast cancers which are both ER-positive and HER2-negative can be included in the study because the metastases are suitably targeted by the study treatments. If patients have bilateral tumors which are of different biomarker status, then proof of the ER and HER2 status of the metastases is required for study entry
- * No history of systemic anti-cancer therapy for locally advanced (recurrent or progressed) or metastatic disease
- * Disease recurrence from early-stage breast cancer after standard adjuvant endocrine therapy meeting the protocol-defined criteria of having received at least 24 months of treatment without disease progression during treatment and a disease-free interval since the completion of treatment that was greater than 12 months
- * Measurable disease as defined per RECIST v.1.1 or bone only disease which must have at least one predominantly lytic bone lesion confirmed by CT or MRI which can be followed
- * Eastern Cooperative Oncology Group Performance Status 0-1
- * Adequate organ function

4.2 Exclusion Criteria

- * Disease recurrence during or within 12 months of completing prior neoadjuvant or adjuvant treatment with any CDK4/6 inhibitor
- * Prior treatment with a selective estrogen receptor degrader (SERD)
- * Treatment with any investigational therapy within 28 days prior to study treatment
- * Treatment with strong CYP3A inhibitors or inducers within 14 days or 5 drug elimination half-lives (whichever is longer) prior to randomization
- * Advanced, symptomatic, visceral spread that is at risk of life-threatening complications in the short term
- * Known active uncontrolled or symptomatic CNS metastases, carcinomatous meningitis, or leptomeningeal disease
- * Active cardiac disease or history of cardiac dysfunction, as defined in the protocol
- * Pregnant or breastfeeding

11. Study Identifiers & Governance

Primary ID:	740358318437416861
Registry Number:	NCT04546009
Sponsor:	Roche
Study Title:	A Study Evaluating the Efficacy and Safety of Giredestrant Combined With Palbociclib Compared With Letrozole Combined With Palbociclib in Participants With Estrogen Receptor-Positive, HER2-Negative Locally Advanced or Metastatic Breast Cancer (persevERA Breast Cancer)

15. Sign-off & Approval

Principal Investigator: _____ Date: _____
