

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase III Multicenter, Randomized, Double-blind, Double-dummy Study to Evaluate Safety and Efficacy of Ocrelizumab in Comparison With Fingolimod in Children and Adolescents With Relapsing-Remitting Multiple Sclerosis
Short Title:	A Study to Evaluate Safety and Efficacy of Ocrelizumab in Comparison With Fingolimod in Children and Adolescents With Relapsing-Remitting Multiple Sclerosis (RRMS)
Protocol Number:	920486564724314556
NCT Number:	NCT05123703
Sponsor Name:	Roche
Investigational Product:	fingolimod
Phase:	PHASE3
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Annualized Relapse Rate (ARR)
Secondary Obj.:	1. Number of New or Enlarging T2-hyperintense Lesions (T2 lesions) as Detected by Brain Magnetic Resonance Imaging (MRI) During the Double-blind Period 2. Number of New or Enlarging T2 Lesions by Week 96 3. ARR by Week 96

2.2 Background & Rationale

This double-blind, double-dummy study will evaluate the safety and efficacy of ocrelizumab compared with fingolimod in children and adolescents with RRMS aged between 10 and < 18 years over a flexible duration. The double-blind period will last until after the last participant randomized has completed 24 weeks.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE3, Status: ACTIVE_NOT_RECRUITING
Target N:	188

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- * Body weight ≥ 25 kilograms (kg)
- * Diagnosis of RRMS in accordance with the International Pediatric Multiple Sclerosis Study Group (IPMSSG) criteria for pediatric Multiple Sclerosis (MS), Version 2012, or McDonald criteria 2017
- * Expanded Disability Status Scale (EDSS) at screening: 0-5.5, inclusive
- * For all countries except Germany, at least one MS relapse during the previous year or two MS relapses in the previous 2 years or evidence of at least one Gd enhancing lesion on MRI within 6 months

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

Inclusion Criteria for Optional OLE Period:

-Participants in Group A (ocrelizumab in the double-blind period \[DBP\]) and Group B (fingolimod in the DBP) who, in the opinion of the investigator, may benefit from switching to ocrelizumab and who have completed the DBP with study treatment (ocrelizumab/fingolimod), may participate in the OLE period

4.2 Exclusion Criteria

- * Known presence or suspicion of other neurologic disorders that may mimic MS
- * Significant uncontrolled somatic diseases, known active infection or any other significant condition that may preclude participant from participating in the study
- * Participants with severe cardiac disease or significant findings on the screening Electrocardiograph (ECG)

Exclusion Criteria for Optional OLE Period:

-Participants who have discontinued the study during the DBP

11. Study Identifiers & Governance

Primary ID:	920486564724314556
Registry Number:	NCT05123703
Sponsor:	Roche
Study Title:	A Study to Evaluate Safety and Efficacy of Ocrelizumab in Comparison With Fingolimod in Children and Adolescents With Relapsing-Remitting Multiple Sclerosis (RRMS)

15. Sign-off & Approval

Principal Investigator: _____	Date: _____
Clinical Operations Lead: _____	Date: _____
Lead Statistician: _____	Date: _____
