

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Randomised, Double-blind, Placebo-controlled, Parallel Group, Multicentre, Phase III Study to Evaluate the Efficacy and Safety of Tezepelumab in Adult Participants With Moderate to Very Severe Chronic Obstructive Pulmonary Disease
Short Title:	A Study to Investigate the Efficacy and Safety of Tezepelumab in Adult Participants With Moderate to Very Severe COPD (D5241C00006)
Protocol Number:	448321960393699413
NCT Number:	NCT06883305
Sponsor Name:	AstraZeneca
Investigational Product:	tezepelumab
Phase:	PHASE3
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Annualised rate of moderate or severe COPD exacerbations: The annualised moderate or severe COPD exacerbation rate (based on exacerbations reported by the investigator) up to 76 weeks treatment period compared to placebo.
Secondary Obj.:	1. Change from baseline in post-BD FEV1 2. Change from baseline in pre-dose/pre-bronchodilator (pre-BD) forced expiratory volume in 1 second (FEV1) 3. Change from baseline in the St. George's Respiratory Questionnaire (SGRQ) total score

2.2 Background & Rationale

A Multicenter, Randomized, Double-blind, Placebo-controlled, Parallel Group, Phase 3 Study to Evaluate the Efficacy and Safety of Tezepelumab in Adults with Moderate to Very Severe Chronic Obstructive Pulmonary Disease (COPD)

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE3, Status: RECRUITING
Target N:	990

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- ≥40 to ≤80 years old
- COPD diagnosis ≥1 year,
- Post-BD FEV1 ≥ 20% and ≤ 70% PN, FEV1/FVC <0.70 at screening
- Triple (ICS+LABA+LAMA) or dual inhaled COPD therapy, if triple therapy is considered not appropriate, ≥3 consecutive months prior to V1

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

5. ≥ 2 moderate or ≥ 1 severe COPD exacerbations in the prior year; At least 1 of 2 moderate exacerbations must require the use of systemic corticosteroids. At least one of the previous exacerbations should be confirmed to have occurred while the participant was on triple or dual inhaled maintenance therapy

6. EOS ≥ 150 cells/ μ L during screening

7. CAT ≥ 15 at screening

8. Former or current smokers ≥ 10 pack-years

4.2 Exclusion Criteria

1. Clin. important pulmonary disease or radiological findings suggestive of a respiratory disease other than COPD

2. Asthma, incl. pediatric, or ACOS

3. Any unstable disorder that can impact participants safety or study outcomes

4. Tuberculosis requiring treatment within 12 months prior V2

5. Malignancies current or past

Concomitant therapies:

* Macrolides (less than 6 months)

* Systemic immuno-suppressive, -modulating medications

6. LTOT > 4.0 L/min or O₂ saturation $< 89\%$ despite LTOT

11. Study Identifiers & Governance

Primary ID: 448321960393699413

Registry Number: NCT06883305

Sponsor: AstraZeneca
