

# Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

## 1. Administrative & Study Identification

|                          |                                                                                                                                                                             |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Full Study Title:        | A Phase 2, Randomized, Double-Blind, Comparator-Controlled Study to Evaluate the Safety, Tolerability, and Immunogenicity of V540A in Healthy Females 16 to 26 Years of Age |
| Short Title:             | A Clinical Study of V540A in Healthy Female Participants (V540A-005)                                                                                                        |
| Protocol Number:         | 1039486491264115457                                                                                                                                                         |
| NCT Number:              | NCT07224477                                                                                                                                                                 |
| Sponsor Name:            | Merck                                                                                                                                                                       |
| Investigational Product: | L1 protein, human papillomavirus type 18 vaccine                                                                                                                            |
| Phase:                   | PHASE2                                                                                                                                                                      |
| Medical Monitor:         | [Not Provided in Posting]                                                                                                                                                   |

## 2. Study Synopsis & Rationale

### 2.1 Study Objective

|                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Primary Objective: | <p>1. Number of Participants Who Experience ?1 Solicited Injection-site Adverse Event (AE): An AE is any untoward medical occurrence in a clinical study participant, temporally associated with the use of study intervention, whether or not considered related to the study intervention. Solicited injection-site AEs include redness (erythema), swelling (swelling), and pain or tenderness (pain). The number of participants who experienced at least 1 solicited injection-site AE from Day 1 through Day 5 post each vaccination will be reported.</p> <p>2. Number of Participants Who Experience ?1 Solicited Pyrexia AE: Pyrexia is defined as a temperature(s) ?100.4°F (?38.0°C). The number of participants with solicited pyrexia from Day 1 through Day 5 post each vaccination will be reported.</p> <p>3. Number of Participants Who Experience ?1 Vaccine-related Serious AE (SAE): A vaccine-related SAE is any untoward medical consequence that results in death, is life-threatening, requires inpatient hospitalization or prolongs existing hospitalization, results in persistent or significant disability/incapacity, is a congenital anomaly/birth defect, or is another important medical event which is determined by the investigator to be related to the vaccine. The number of participants who experienced at least 1 vaccine-related SAE will be reported.</p> |
| Secondary Obj.:    | <p>1. GMTs of Each of the Shared and Unique HPV Vaccine Types at Day 29 Postdose 1</p> <p>2. GMTs of Each of the Shared and Unique HPV Vaccine Types at Day 29 Postdose 2</p> <p>3. GMTs to Each of the Shared and Unique HPV Vaccine Types at Day 29 Postdose 3</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

### 2.2 Background & Rationale

Researchers are looking for new ways to prevent cancers related to human papillomavirus (HPV). HPV is a common virus that can cause an infection. There are many different types of HPV.

# Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

## 3. Study Design & Methodology

**Design Framework:** Type: INTERVENTIONAL, Phase: PHASE2, Status: NOT\_YET\_RECRUITING

**Target N:** 525

## 4. Subject Selection (Eligibility Criteria)

### 4.1 Inclusion Criteria

The main inclusion criteria include but are not limited to the following:

- \* Is in good health
- \* Has a lifetime history of 0 to 4 sexual partners of any sex/gender
- \* A participant assigned female sex at birth is eligible to participate if not breastfeeding during the study intervention period and for at least 30 days after the last dose of study intervention

### 4.2 Exclusion Criteria

The main exclusion criteria include but are not limited to the following:

- \* Has a history of severe allergic reaction (e.g., swelling of the mouth and throat, difficulty breathing, hypotension, or shock) that required medical intervention
- \* Has known or history of functional or anatomic asplenia
- \* Is currently immunocompromised or has been diagnosed as having congenital or acquired immunodeficiency, human immunodeficiency virus infection, lymphoma, leukemia, systemic lupus erythematosus, rheumatoid arthritis, juvenile rheumatoid arthritis, inflammatory bowel disease, or other autoimmune condition
- \* Has thrombocytopenia or other coagulation disorder
- \* Has had a positive test for human papillomavirus (HPV)
- \* Has a history of recurrent respiratory papillomatosis or HPV-related head and neck cancer, or HPV-related anal lesions or anal cancer
- \* Has a history of an abnormal cervical biopsy result
- \* Has a history of HPV-related external genital lesions or external genital cancer, HPV-related vaginal lesions or vaginal cancer
- \* Has received a dose of any HPV vaccine before study entry
- \* Has received within 12 months before the Day 1 vaccination, is receiving, or plans to receive during the study, immunosuppressive therapies or other therapy known to interfere with the immune response
- \* Is currently receiving systemic steroid therapy or has received 2 or more courses of high-dose corticosteroids lasting at least 1 week in duration in the year prior to Day 1 vaccination
- \* Has received within the 3 months before the Day 1 vaccination, is receiving, or plans to receive during the study any immune globulin product

## 11. Study Identifiers & Governance

**Primary ID:** 1039486491264115457

# Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

**Registry Number:** NCT07224477  
**Sponsor:** Merck  
**Study Title:** A Clinical Study of V540A in Healthy Female Participants (V540A-005)

## 15. Sign-off & Approval
