

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Randomized, Phase 2/3 Study Comparing BMS-986504 in Combination With Nab-paclitaxel and Gemcitabine Versus Placebo in Combination With Nab-paclitaxel and Gemcitabine in Participants With Untreated Metastatic Pancreatic Ductal Adenocarcinoma Harboring Homozygous MTAP Deletion
Short Title:	A Study Comparing BMS-986504 in Combination With Nab-paclitaxel and Gemcitabine Versus Placebo in Combination With Nab-paclitaxel and Gemcitabine in Participants With Untreated Metastatic Pancreatic Ductal Adenocarcinoma With Homozygous MTAP Deletion (MountainTAP-30)
Protocol Number:	193831402896745096
NCT Number:	NCT07076121
Sponsor Name:	Bristol Myers Squibb
Investigational Product:	gemcitabine
Phase:	PHASE2, PHASE3
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Progression-Free Survival as assessed by Response Evaluation Criteria in Solid Tumors version v1.1 (RECIST v1.1): Defined as the time between the randomization date and the date of progressive disease (PD) or death from any cause (whichever occurs first) 2. Overall Survival (OS): Defined as the time from the randomization date to the date of death from any cause
Secondary Obj.:	1. Objective Response (OR) as assessed by RECIST v1.1 2. Duration of Response (DOR) as assessed by RECIST v1.1 3. Time to Objective Response (TTOR) as assessed by RECIST v1.1

2.2 Background & Rationale

The purpose of this study is to assess the safety and efficacy of BMS-986504, a selective, MTA-cooperative PRMT5 inhibitor, in combination with Nab-paclitaxel/Gemcitabine (nab-p/gem) versus placebo in combination with nab-p/gem, in participants with untreated metastatic Pancreatic Ductal Adenocarcinoma (PDAC) with homozygous methylthioadenosine phosphorylase (MTAP) deletion.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE2, PHASE3, Status: RECRUITING
Target N:	470

4. Subject Selection (Eligibility Criteria)

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

4.1 Inclusion Criteria

- * Histologically or cytologically confirmed diagnosis of metastatic pancreatic ductal adenocarcinoma (PDAC).
- * Evidence of homozygous methylthioadenosine phosphorylase (MTAP) deletion or MTAP loss detected in tumor tissue.
- * Metastatic disease with at least 1 measurable lesion as per Response Evaluation Criteria in Solid Tumors version v1.1 (RECIST v1.1).
- * Participants must not have received any systemic anticancer treatments in the metastatic setting.
- * If clinically indicated and as per investigator discretion, participants may receive up to 1 cycle of Nab-paclitaxel/Gemcitabine (nab-p/gem) in the metastatic setting and must have not progressed or required discontinuation due to intolerable toxicity.
- * Initial cycle of nab-p/gem administered in the metastatic setting must have been completed prior to randomization.

4.2 Exclusion Criteria

- * Concurrent malignancy (present during screening) requiring treatment or history of prior malignancy active within 2 years prior to screening.
- * Other protocol-defined Inclusion/Exclusion criteria apply.

11. Study Identifiers & Governance

Primary ID:	193831402896745096
Registry Number:	NCT07076121
Sponsor:	Bristol Myers Squibb
Study Title:	A Study Comparing BMS-986504 in Combination With Nab-paclitaxel and Gemcitabine Versus Placebo in Combination With Nab-paclitaxel and Gemcitabine in Participants With Untreated Metastatic Pancreatic Ductal Adenocarcinoma With Homozygous MTAP Deletion (MountainTAP-30)

15. Sign-off & Approval
