

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase 2 Randomized, Double-Blind, Placebo-Controlled Study to Evaluate Efficacy and Safety of Deucravacitinib (BMS-986165) in Participants With Active Discoid and/or Subacute Cutaneous Lupus Erythematosus (DLE/SCLE)
Short Title:	A Study to Evaluate Efficacy and Safety of Deucravacitinib in Participants With Active Discoid and/or Subacute Cutaneous Lupus Erythematosus (DLE/SCLE)
Protocol Number:	215931690249756012
NCT Number:	NCT04857034
Sponsor Name:	Bristol Myers Squibb
Investigational Product:	deucravacitinib
Phase:	PHASE2
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective: 1. Percentage Change From Baseline in CLASI Activity Score at Week 16: The Cutaneous Lupus Erythematosus Disease Area and Severity Index (CLASI) is a validated clinical tool designed to assess skin involvement in cutaneous lupus erythematosus (CLE).

It separately scores:

- * Disease activity (e.g., erythema, scale, mucous membrane involvement, alopecia)
- * Damage (e.g., dyspigmentation, scarring)

CLASI enables classification of disease severity:

Mild: Activity score 0-9 Moderate: 10-20 Severe: 21-70

Secondary Obj.: 1. Percentage of Participants With an Improvement of $\geq$ 50% From Baseline in the CLASI-A Score (CLASI-50). 2. Percentage of Participants Who Have Disease Improvement as Defined by a Reduction in CLASI-A of $\geq$ 4 Points From Baseline. 3. Mean Change From Baseline in CLASI-A Score.

2.2 Background & Rationale

The purpose of this study is to assess the safety, efficacy, and tolerability of deucravacitinib (BMS-986165) compared with placebo in participants with active discoid and/or subacute cutaneous lupus erythematosus (DLE/SCLE). This study will also assess if deucravacitinib is biologically active and potentially effective in the treatment of participants with moderate to severe DLE/SCLE with or without systemic lupus erythematosus (SLE) that is not well controlled with

Clinical Study Summary Report (CSSR)

standard of care therapy.

3. Study Design & Methodology

Design Framework: Type: INTERVENTIONAL, Phase: PHASE2, Status: ACTIVE_NOT_RECRUITING
Target N: 74

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- * Diagnosis of discoid/subacute cutaneous lupus erythematosus (DLE/SCLE) for at least 3 months prior to screening visit
- * Meets both clinical and histopathological diagnostic cutaneous lupus erythematosus (CLE) criteria per protocol
- * Currently receiving treatment for DLE/SCLE with a stable regimen of at least one of the following medications: oral corticosteroid, and/or antimalarial, and/or immunosuppressant
- * Participant could be with or without concurrent systemic lupus erythematosus (SLE)
- * If participant receives nonsteroidal anti-inflammatory drugs (NSAIDs) or analgesics treatment then the participant must be on a stable dose 2 weeks prior to screening

4.2 Exclusion Criteria

- * Women who are pregnant, lactating, breastfeeding or planning pregnancy during the study period
- * Any of the following specific CLE subtypes in isolation: acute cutaneous lupus erythematosus (ACLE), lupus tumidus, lupus (profundus) panniculitis, chilblains
- * Drug-induced CLE and/or drug-induced systemic lupus erythematosus (SLE)
- * Antiphospholipid antibody syndrome, serious thrombotic event or unexplained pregnancy loss within 1 year before the screening visit
- * History of 3 or more unexplained consecutive pregnancy losses
- * Active severe or unstable neuropsychiatric SLE
- * Other autoimmune diseases or non-SLE driven inflammatory joint or skin disease or overlap syndromes as primary disease that in the opinion of the investigator will significantly impact the assessment of CLE/SLE disease manifestations and activity

Other protocol-defined inclusion/exclusion criteria apply

11. Study Identifiers & Governance

Primary ID: 215931690249756012
Registry Number: NCT04857034
Sponsor: Bristol Myers Squibb
Study Title: A Study to Evaluate Efficacy and Safety of Deucravacitinib in Participants With Active Discoid and/or Subacute Cutaneous Lupus Erythematosus (DLE/SCLE)
