

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Randomized, Controlled Study to Evaluate LNP023 (Iptacopan) in Patients With Active ANCA-associated Vasculitis
Short Title:	Iptacopan in Patients With ANCA Associated Vasculitis
Protocol Number:	621805263551036858
NCT Number:	NCT06388941
Sponsor Name:	Novartis
Investigational Product:	rituximab
Phase:	PHASE2
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Sustained remission through Week 48 defined as complete remission at Week 24 without major relapse up to Week 48.: To assess the effect of iptacopan in achieving sustained remission compared to standard of care (SOC)
Secondary Obj.:	1. B cell counts 2. Total IgG levels 3. Complete remission at week 24

2.2 Background & Rationale

The purpose of this study is to evaluate the efficacy and safety of iptacopan compared to standard of care (SOC) to induce and maintain remission in study participants with active granulomatosis with polyangiitis (GPA) or microscopic polyangiitis (MPA), when used in combination with rituximab (RTX) induction. The trial will also assess the impact of iptacopan on disease relapses, evolution of renal function and proteinuria, GC side effects, patients' immune status, and QoL.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE2, Status: RECRUITING
Target N:	78

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- * Newly diagnosed or relapsed GPA and MPA (according to the 2022 ACR/EULAR classification criteria for GPA and MPA) requiring treatment with RTX and GC as per investigator's judgement.
- * BVAS assessment with ≥1 major item, or ≥3 minor items, or ≥2 renal items at Screening.
- * Positive antibody test for anti-proteinase 3 (PR3) or anti-myeloperoxidase (MPO) antibodies at Screening or with history of documented evidence of a positive antibody test.

4.2 Exclusion Criteria

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

- * Other systemic disease which constitutes the primary illness, including but not limited to: eosinophilic granulomatosis with polyangiitis (EGPA), moderate to severe systemic lupus erythematosus, IgA vasculitis (Purpura Schönlein-Henoch), rheumatoid vasculitis, Sjögren's syndrome, anti-glomerular basement membrane (GBM) disease, cryoglobulinemic vasculitis, autoimmune hemolytic anemia, autoimmune lymphoproliferative syndrome or mixed connective tissue disease.
- * Alveolar hemorrhage requiring invasive pulmonary ventilation support at Screening.
- * Severe kidney disease defined as estimated glomerular filtration rate (eGFR) ≤ 15 mL/minute/1.73m², or kidney failure defined as receiving renal replacement therapy such as hemo(dia)filtration, hemo-/peritoneal dialysis, or having received a kidney transplant.
- * Received plasma exchange/-pheresis within 12 weeks prior to Screening.

11. Study Identifiers & Governance

Primary ID: 621805263551036858
Registry Number: NCT06388941
Sponsor: Novartis
Study Title: Iptacopan in Patients With ANCA Associated Vasculitis

15. Sign-off & Approval
