

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase 2, Double-blind, Randomized, Placebo-controlled, Multicenter Study to Evaluate the Efficacy, Safety and Pharmacokinetics of Luspatercept (ACE-536) in Chinese Adult Subjects Who Require Regular Red Blood Cell Transfusions Due to Beta (?) -Thalassemia
Short Title:	A Study to Evaluate Luspatercept (ACE-536) in Chinese Participants Who Require Regular Red Blood Cell Transfusions Due to Beta (?) -Thalassemia.
Protocol Number:	806364686057352666
NCT Number:	NCT05567458
Sponsor Name:	Bristol Myers Squibb
Investigational Product:	luspatercept
Phase:	PHASE2
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Proportion of participants with ? 33% reduction from baseline in red blood cell (RBC) transfusion burden over any consecutive 24 weeks
Secondary Obj.:	1. Proportion of subjects with ? 33% reduction from baseline in RBC transfusion burden during any rolling 24-week interval compared to the 24-week interval prior to start of IP for luspatercept plus BSC versus placebo plus BSC. 2. Proportion of participants with ? 33% reduction from baseline in RBC transfusion burden over any consecutive 12 weeks 3. Proportion of participants with ? 50% reduction from baseline in RBC transfusion burden over any consecutive 12 weeks

2.2 Background & Rationale

The purpose of this study is to evaluate the efficacy, safety and pharmacokinetics of luspatercept plus best supportive care (BSC) versus placebo plus BSC in participants who require regular red blood cell transfusions due to ?-thalassemia.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE2, Status: ACTIVE_NOT_RECRUITING
Target N:	94

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

* Participant is willing and able to adhere to the study visit schedule (for example, not scheduled to receive

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

hematopoietic stem cell transplantation \[HSCT\]) and other protocol requirements.

- * Participant has documented diagnosis of β -thalassemia or Hemoglobin E/ β -thalassemia (β -thalassemia with mutation and/or multiplication of alpha (α) globin is allowed).
- * Participant is regularly transfused, defined as: 6-25 RBC units in the 24 weeks prior to randomization and no transfusion-free period for ≥ 42 days during that period.
- * Participant has Eastern Cooperative Oncology Group (ECOG) score of 0 or 1.

4.2 Exclusion Criteria

- * Participant has a diagnosis of Hemoglobin S/ β -thalassemia or β -thalassemia (for example, Hemoglobin H).
- * Participant has active hepatitis C virus (HCV) infection as demonstrated by a positive HCVribonucleic acid (RNA) test of sufficient sensitivity, or active infectious hepatitis B virus (HBV) as demonstrated by the presence of hepatitis B surface antigen (HBsAg) and/or HBVdeoxyribonucleic acid (DNA) positive, or known positive human immunodeficiency virus (HIV).
- * Participant has a history of deep venous thrombosis or stroke or thromboembolic events (venous or arterial) requiring medical intervention ≥ 24 weeks prior to randomization.
- * Participant uses chronic anticoagulant therapy, unless the treatment stopped at least 28 days prior to randomization. Anticoagulant therapies used for prophylaxis for surgery or high-risk procedures as well as low-molecular-weight heparin for superficial venous thrombosis and chronic aspirin are allowed.
- * Participant who has EMH complications requiring treatment to control the growth of EMH mass(es) during the screening period.
- * Participant used immunomodulatory imide drugs (IMiDs) ≥ 24 weeks prior to randomization

11. Study Identifiers & Governance

Primary ID: 806364686057352666

Registry Number: NCT05567458

Sponsor: Bristol Myers Squibb

Study Title: A Study to Evaluate Luspatercept (ACE-536) in Chinese Participants Who Require Regular Red Blood Cell Transfusions Due to Beta (β)-Thalassemia.
