

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase Ib/II, Open-Label, Multicenter, Randomized Umbrella Study Evaluating the Efficacy and Safety of Multiple Treatment Combinations in Patients With Gastric or Gastroesophageal Junction Carcinoma (MORPHEUS C-Gastric and Gastroesophageal Junction Carcinoma)
Short Title:	An Umbrella Study Evaluating the Efficacy and Safety of Multiple Treatment Combinations in Patients With Gastric or Gastroesophageal Junction Carcinoma
Protocol Number:	1150099463511524645
NCT Number:	NCT05251948
Sponsor Name:	Roche
Investigational Product:	oxaliplatin
Phase:	PHASE1, PHASE2
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Objective Response Rate (ORR): ORR is defined as the proportion of participants with a complete response or a partial response on two consecutive occasions ≥ 4 weeks apart during Stage 1, as determined by the investigator according to RECIST v1.1.
Secondary Obj.:	1. Progression-Free Survival (PFS) 2. Overall Survival (OS) 3. Overall Survival (OS)

2.2 Background & Rationale

This is a Phase Ib/II, open-label, multicenter, randomized umbrella study in participants with advanced gastric carcinoma (GC) or gastroesophageal junction carcinoma (GEJC). The study is designed with the flexibility to open new treatment arms as new treatments become available, close existing treatment arms that demonstrate minimal clinical activity or unacceptable toxicity, and modify the participant population. Cohort 1 will enroll participants with inoperable locally advanced, metastatic, or advanced GC or GEJC, with adenocarcinoma confirmed as the predominant histology, who have not received prior systemic therapy for advanced or metastatic disease. Eligible participants will initially be randomly assigned to one of treatment arms (Stage 1). Participants who experience loss of clinical benefit or unacceptable toxicity during Stage 1 may be eligible to receive treatment with a different treatment combination (Stage 2). When a Stage 2 treatment combination is available, this will be introduced by amending the protocol.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE1, PHASE2, Status: COMPLETED
Target N:	40

4. Subject Selection (Eligibility Criteria)

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

4.1 Inclusion Criteria

Not Provided

4.2 Exclusion Criteria

Not Provided

11. Study Identifiers & Governance

Primary ID:	1150099463511524645
Registry Number:	NCT05251948
Sponsor:	Roche
Study Title:	An Umbrella Study Evaluating the Efficacy and Safety of Multiple Treatment Combinations in Patients With Gastric or Gastroesophageal Junction Carcinoma
