

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase II, Open-Label, Multi-Drug, Multi-Center, Master Protocol to Evaluate the Efficacy and Safety of Novel Immunomodulators as Monotherapy and in Combination With Anticancer Agents in Participants With Advanced Hepatobiliary Cancer (GEMINI-Hepatobiliary)
Short Title:	Study of Novel Immunomodulators as Monotherapy and in Combination With Anticancer Agents in Participants With Advanced Hepatobiliary Cancer
Protocol Number:	257238836911991724
NCT Number:	NCT05775159
Sponsor Name:	AstraZeneca
Investigational Product:	cisplatin
Phase:	PHASE2
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Objective response rate (ORR): ORR is defined as the proportion of participants who have a confirmed CR (complete response) or confirmed PR (partial response), determined by the Investigator at local site per RECIST 1.1 (For HCC sub-study 1) 2. The number of participants with adverse events/serious adverse events: Number of participants with adverse events and with serious adverse events including abnormal clinical observations, abnormal Electrocardiogram (ECG) parameters, abnormal laboratory assessments and abnormal vital signs that changed from baseline. 3. Progression free survival (PFS): PFS is defined as the time from the start of study/intervention until progression per RECIST 1.1 as assessed by the Investigator at the local site or death due to any cause in the absence of progression, whichever occurs first. (For BTC sub-study 2)
Secondary Obj.:	1. Duration Of Response (DOR) 2. Disease Control Rate (DCR) 3. Progression free survival (PFS)

2.2 Background & Rationale

GEMINI-Hepatobiliary study will assess the efficacy, safety and tolerability of novel immunomodulators alone and in combination with other anticancer drugs in participants with specified advanced solid tumors.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE2, Status: RECRUITING
Target N:	294

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- * Age ≥18 years at the time of signing the ICF.
- * Provision of a signed and dated written ICF.
- * Confirmed locally advanced or metastatic solid tumor specified in substudy based on histopathology.
- * Adequate organ and bone marrow function.
- * At least 1 measurable not previously irradiated lesion per RECIST 1.1
- * Life expectancy of at least 12 weeks at the time of screening.
- * Willing and able to provide an adequate tumor sample.

4.2 Exclusion Criteria

- * History of allogeneic organ transplantation.
- * Active or prior documented autoimmune or inflammatory disorders.
- * Uncontrolled intercurrent illness.
- * History of another primary malignancy, leptomeningeal carcinomatosis, and active primary immunodeficiency.
- * Active infection, brain metastases or spinal cord compression.
- * Participants co-infected with HBV and hepatitis D virus (HDV).
- * Previous treatment in the present study.
- * For substudy 1, history of hepatic encephalopathy within 12 months prior to treatment allocation.

11. Study Identifiers & Governance

Primary ID: 257238836911991724

Registry Number: NCT05775159

Sponsor: AstraZeneca

Study Title: Study of Novel Immunomodulators as Monotherapy and in Combination With Anticancer Agents in Participants With Advanced Hepatobiliary Cancer

15. Sign-off & Approval

Principal Investigator: _____ Date: _____

Clinical Operations Lead: _____ Date: _____

Lead Statistician: _____ Date: _____
